SUMMARY

Backend-focused developer and tech sales professional with 1+ year of hands-on experience building database-driven systems and education-focused products. Proven ability to design scalable PostgreSQL architectures, contribute to real-world applications, and drive measurable social impact through strategic engagement. Currently pursuing a BCS in IT.

EXPERIENCE

Database Administrator (DBA)

Digital Nepal | Kathmandu, Nepal | 2023 – 2024

- Designed and built a structured content management system for an education platform (Grade → Subject → Syllabus → Topic → Content).
- Contributed to Spotit, a real-world product application, focusing on backend data handling, content flow architecture, and system logic.
- Performed PostgreSQL database optimization including VACUUM ANALYZE, dead tuple resolution, and autovacuum tuning to improve query performance.
- Implemented role-based access control (RBAC) in PostgreSQL — managing read-only and restricted write users and debugging permission issues via information_schema.
- Worked with Linux (Ubuntu/Mint) for local dev environments, file encryption (EncFS), and system-level debugging.
- Built complex relational schemas (voter/election databases) with foreign key constraints, NOT NULL enforcement, and insertion debugging.
- Automated workflows using n8n integration tools.

Sales & Outreach Executive

Unnati Nepal | Koshi Province, Nepal | 2022 – 2023

- Promoted and implemented education-focused digital learning tools for students preparing for SEE exams across Koshi Province.
- Managed the full sales and engagement cycle — identifying schools, presenting platform benefits, and converting prospects into active users.
- Onboarded multiple schools and thousands of students, contributing to a 40–60% improvement in regional SEE pass rates.
- Led and coordinated a 9-member sales team, managing outreach activities, follow-ups, and school engagement across Koshi Province.
- Built and maintained relationships with local coordinators and school administrators through trust-based, solution-driven outreach.
- Demonstrated that strategic, education-driven sales can deliver measurable social impact beyond revenue.

PROJECTS

Education Platform — Full Stack / Backend

Tech: PostgreSQL, SQL, Linux

- Architected a hierarchical content system supporting curriculum structuring for student learning.
- Wrote advanced SQL queries for content aggregation, hierarchical data retrieval, and reporting.
- Coordinated backend development with a 15+ member team managing student engagement workflows.

Spotit — Product / Application

Tech: Backend, Database, System Design

- Contributed to a startup-style product, focusing on backend data flows and user content structuring.
- Applied product thinking to backend architecture — designed how user data is stored, retrieved, and managed.
- Supported system logic and ensured reliable backend operation for end users.

TECHNICAL SKILLS

Languages	SQL (Advanced), Python (basic), C, Dart (Flutter)
Databases	PostgreSQL (production-level), MySQL
Frameworks / Tools	Django, Flutter, n8n
Systems	Linux (Ubuntu, Mint), EncFS, Git
Concepts	RBAC, Database Optimization, Schema Design, Backend Architecture

EDUCATION

Bachelor of Computer Science (BCS) — Information Technology

Ambition Guru College | Expected 2026 (3rd year)
